

NetSensor Magic

Your vulnerabilities disappear **like magic.**

Forget everything you know about cybersecurity!

It's not a firewall, it's not an IPS, it's not a WAF...
Open your mind to discover a new layer of **security**,
innovative and **disruptive!**

Imagine your vulnerabilities disappearing **like magic.**

After years of research and development, our clients' dream has become a reality through **NetSensor Magic**, a solution capable of **secretly observing internet traffic, identifying patterns present in a large portion of cyber attacks, learning who is malicious, and *rendering your network invisible to these cybercriminals***, all while continuing to operate normally for your clients and business partners.

Through the recognition of malicious behavior patterns, **NetSensor Magic is capable of creating a layer of invisibility, concealing** the services your company provides on the Internet **from criminals**. As a result information about the services, including the identification of possible vulnerabilities, disappears like magic.

Even a pentest or vulnerability analysis software against your structure exposed on the internet will be **detected and neutralized** by the protection layer of NetSensor Magic, making your structure and the search for possible vulnerabilities invisible and undetectable.

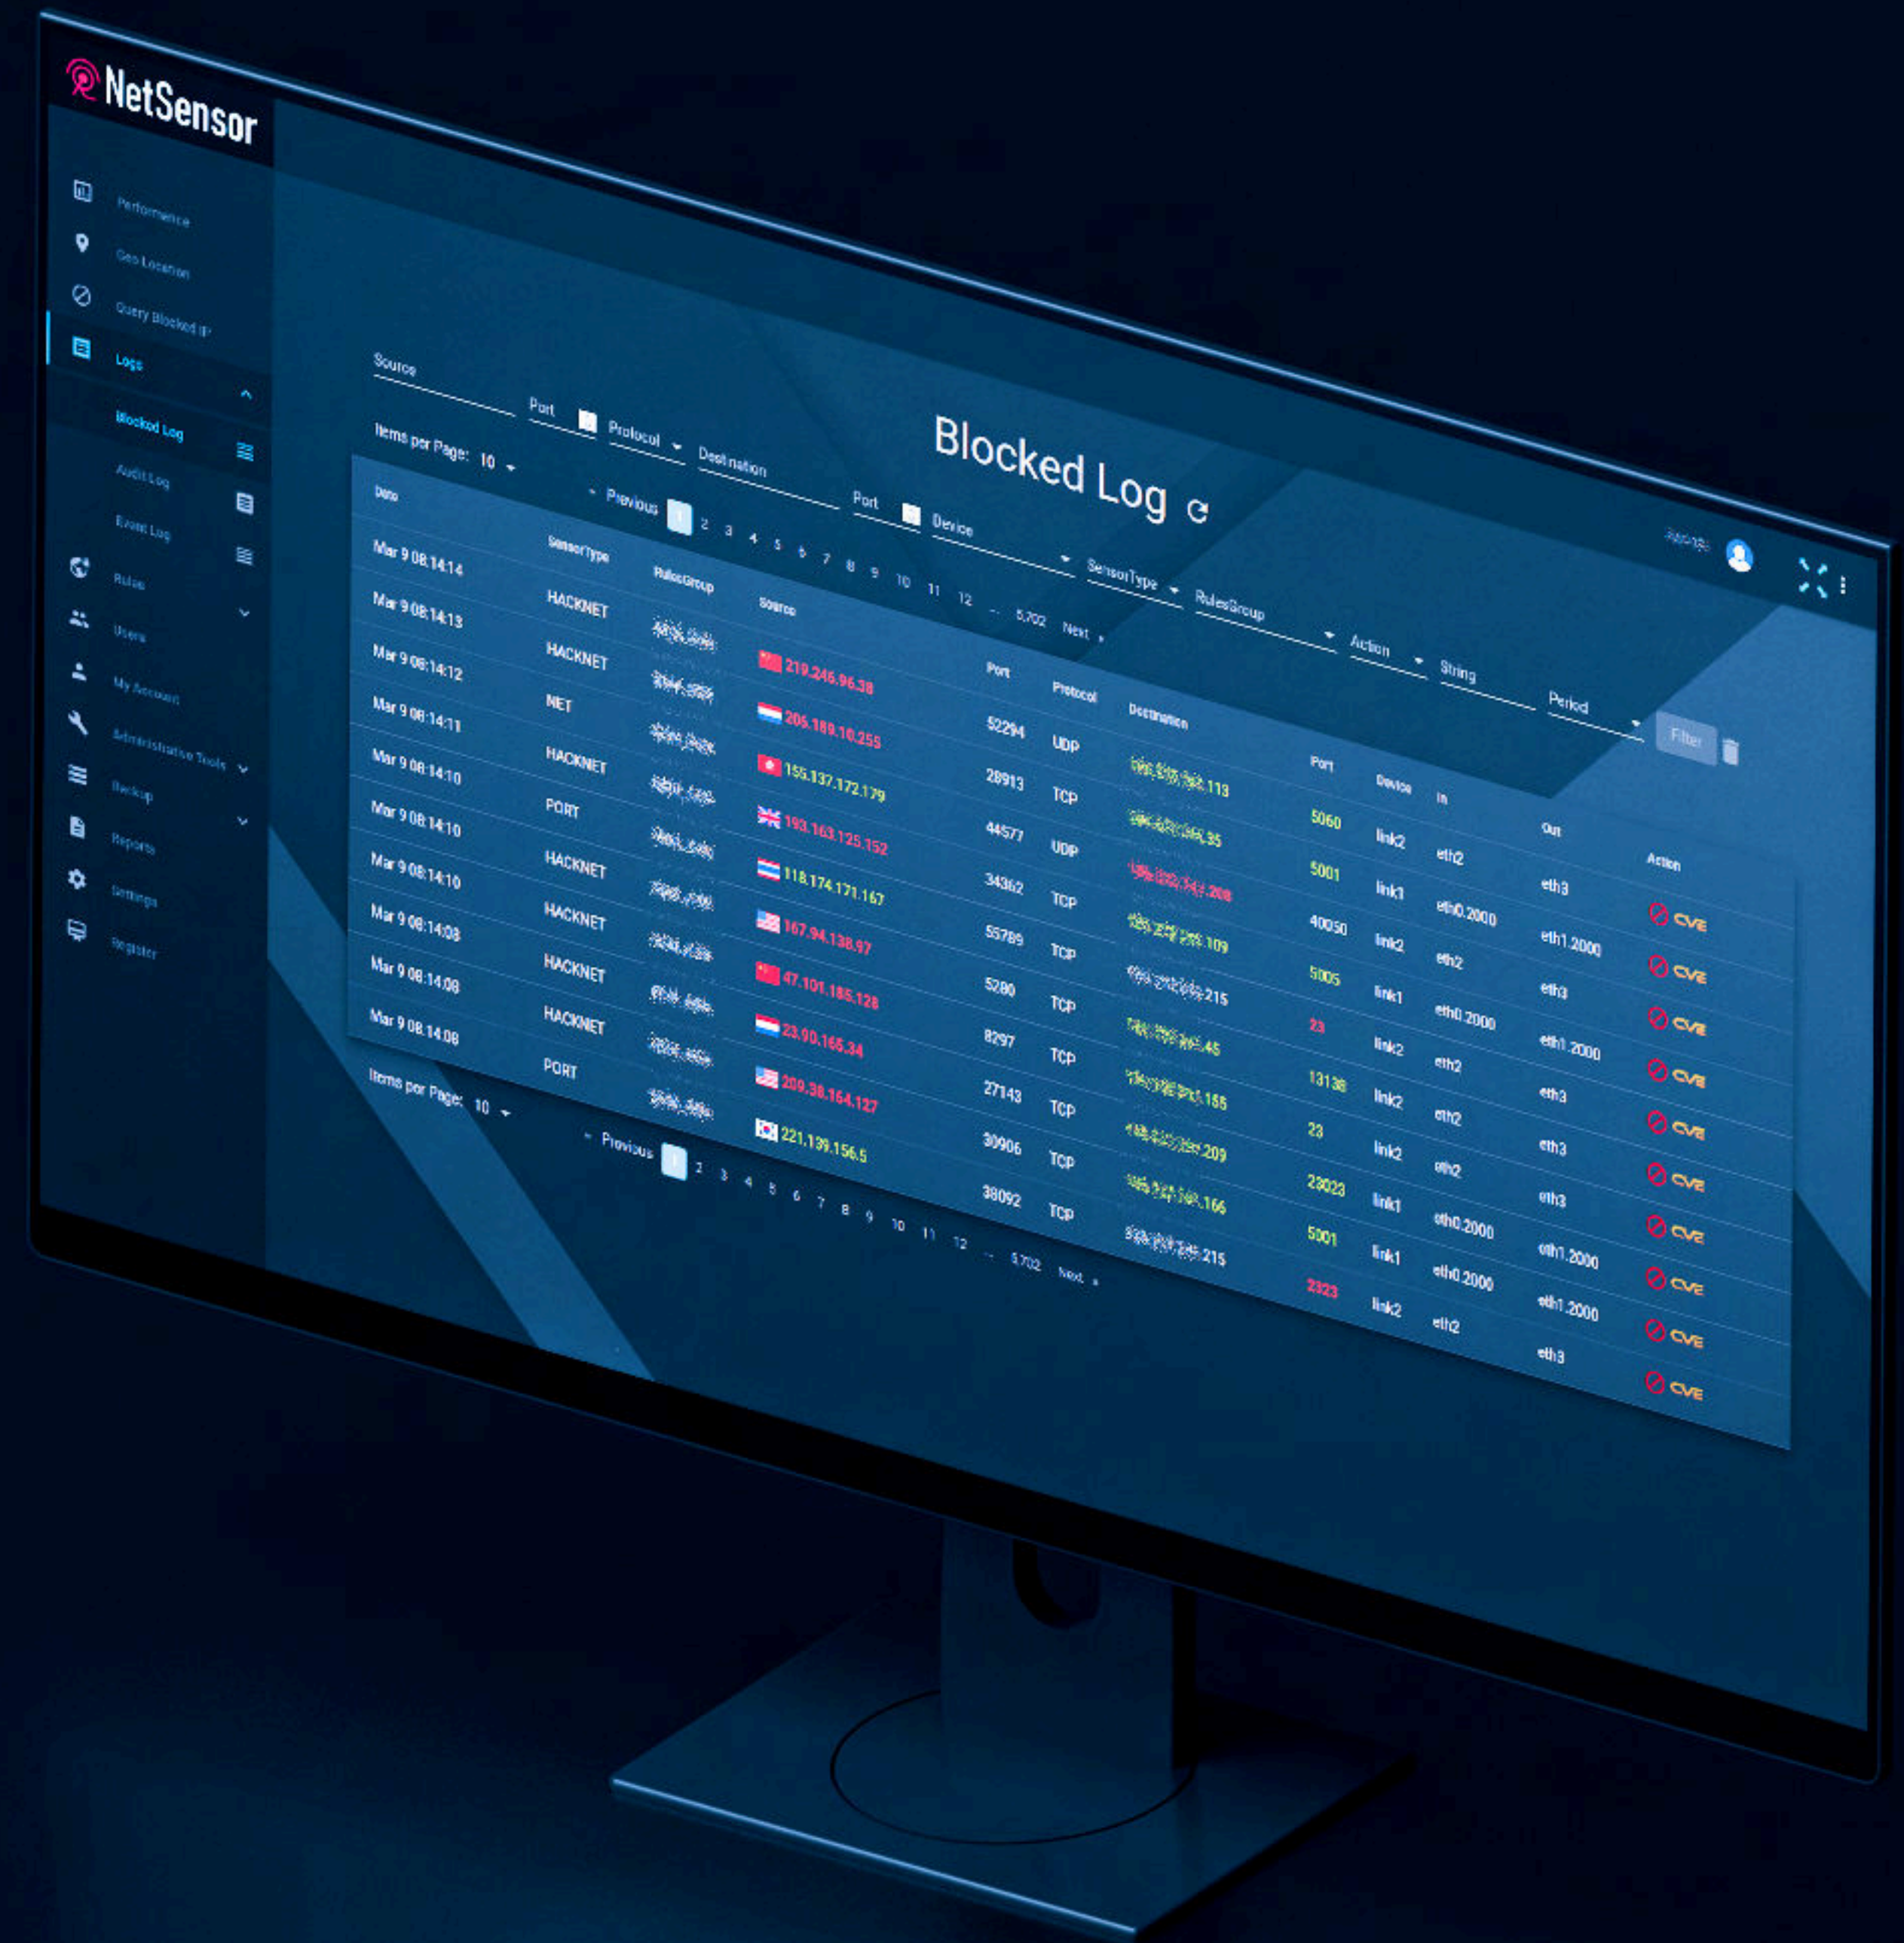

Designed to be a **powerful ally** in the most effective combat against a serious problem that is growing on a frightening scale, cybercrimes, which are **becoming increasingly frequent, close, and successful**. It is aimed at companies that provide IT (Information Technology), OT (Operational Technology), or IoT (Internet of Things) services on the Internet, using an on-premise or hybrid environment.

Through **artificial intelligence** (machine learning), our technology can transparently observe internet traffic, **identify patterns present** in a large portion of cyber attacks, and **block** them in their early stages, before they can be executed.

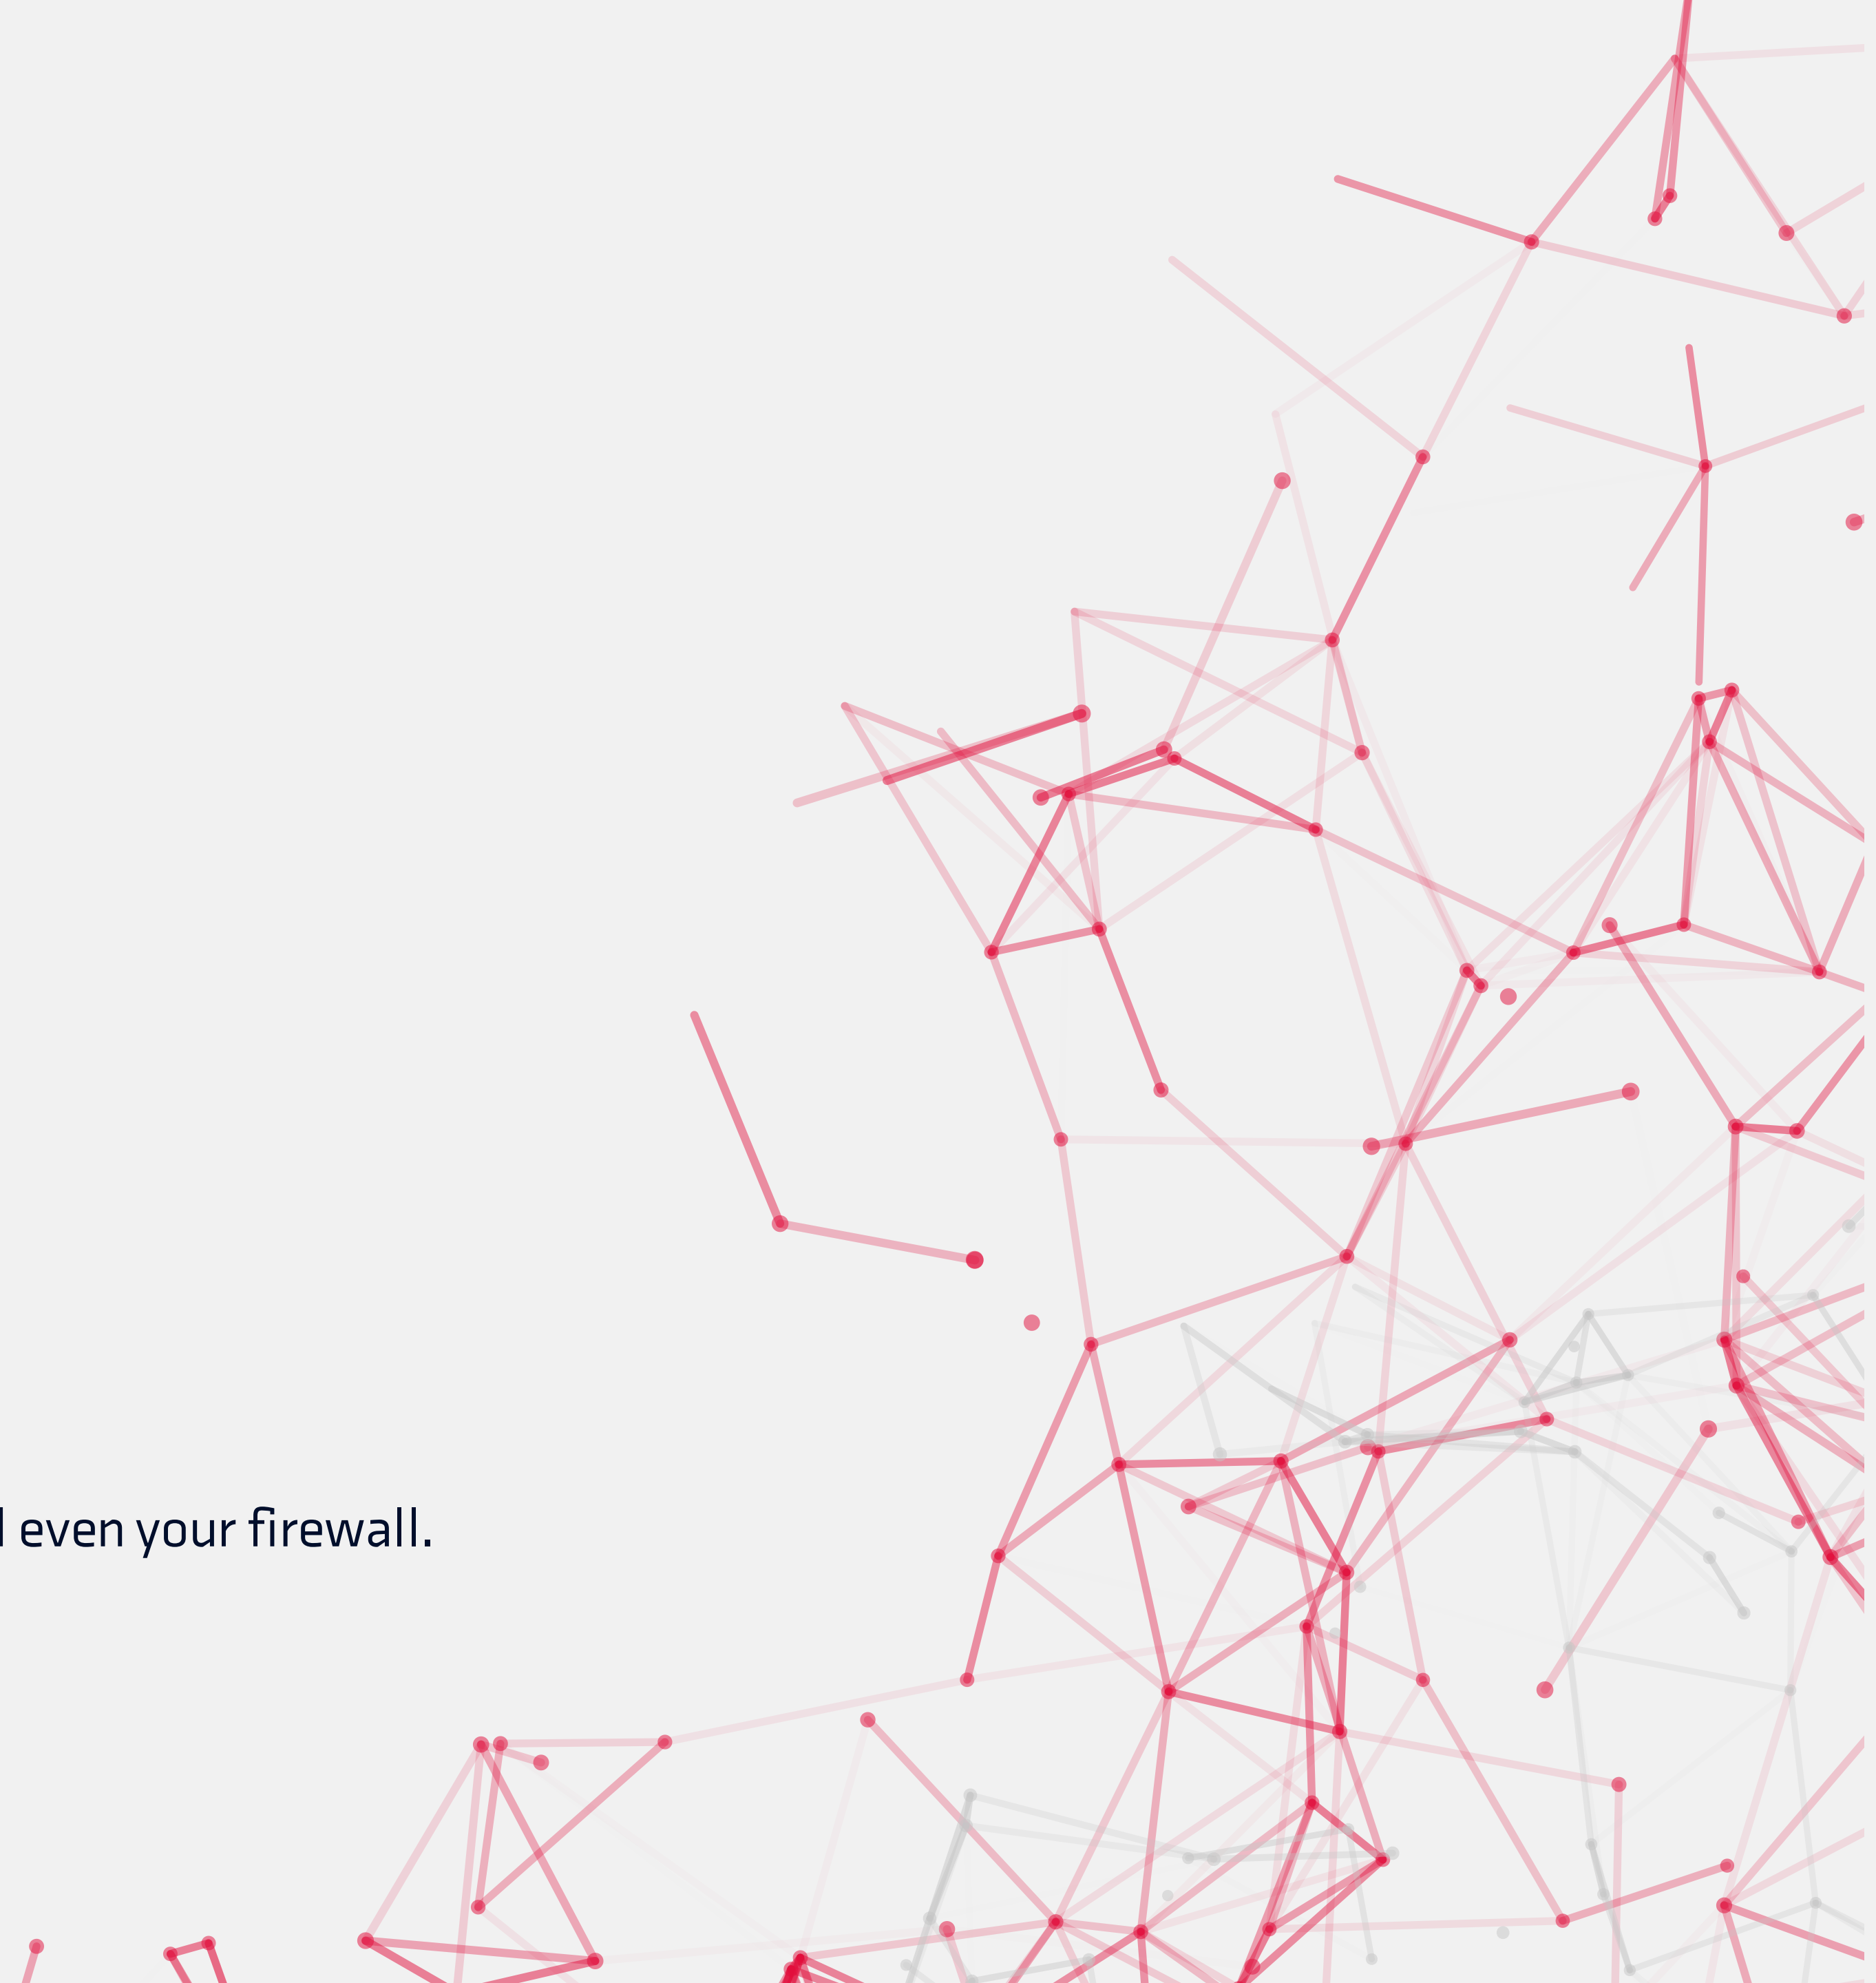

Benefits *exclusive*

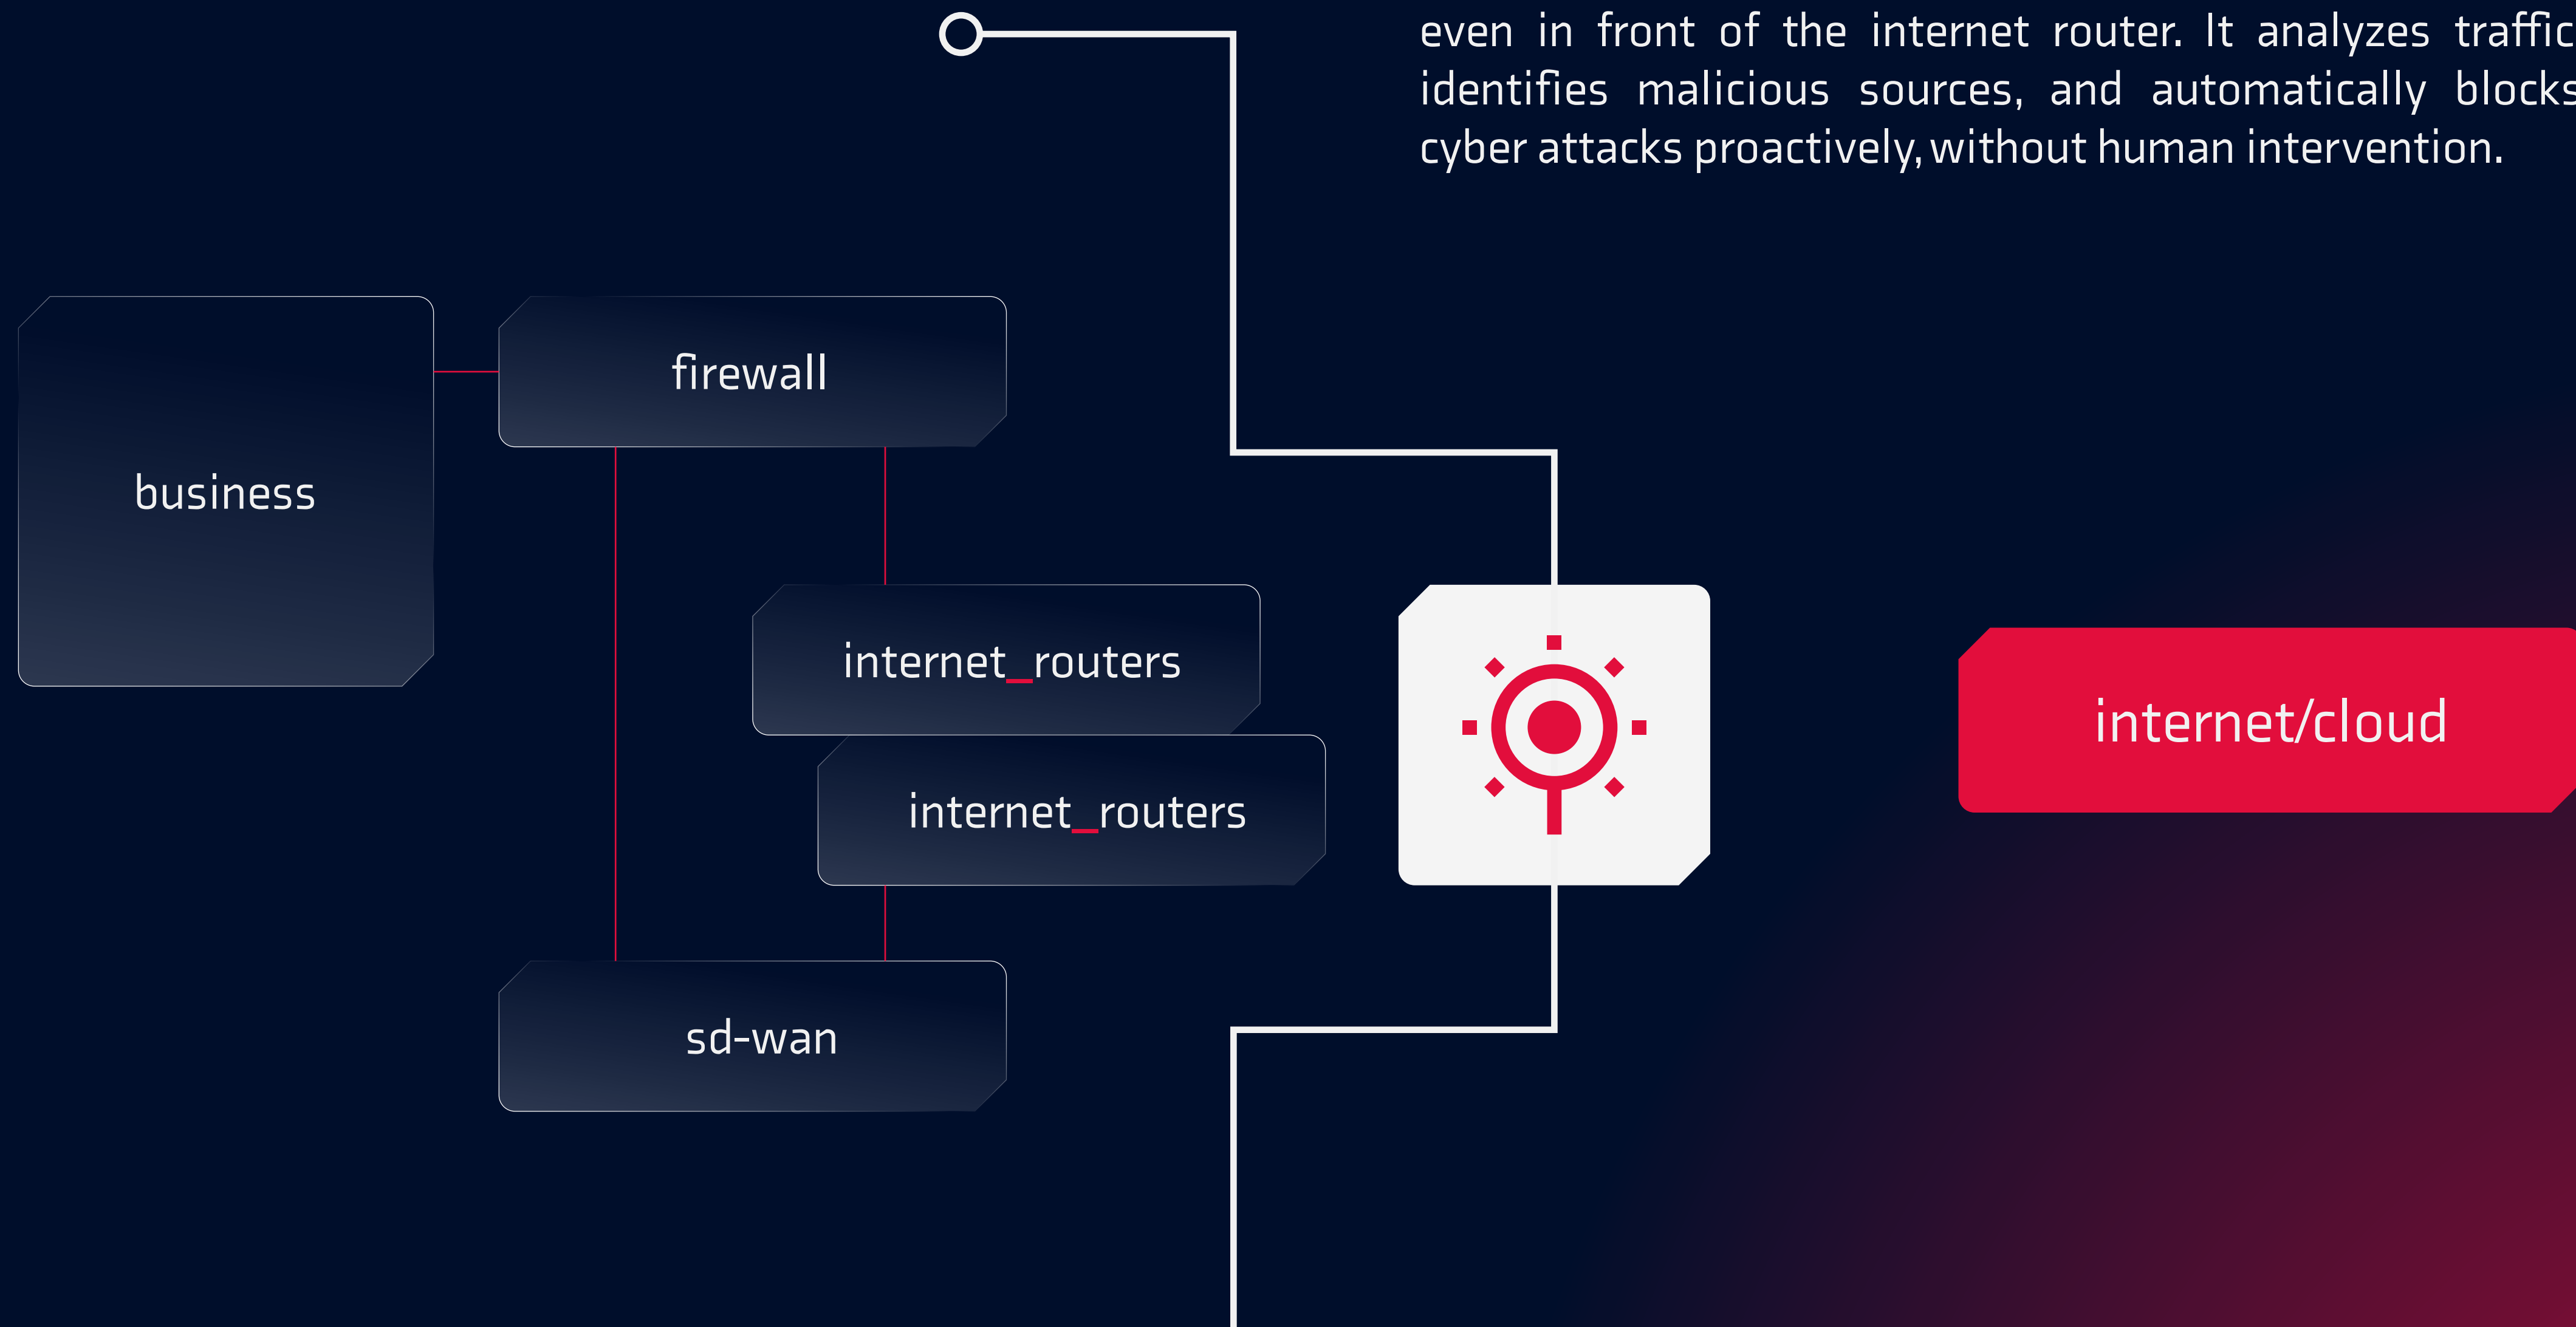

NetSensor Magic will make your company's **security infrastructure smarter**, providing a new layer of security through Artificial Intelligence (AI) to **make decisions and automatically block** sources of cyber attacks.

What makes *NetSensor Magic* different?

- Automatic identification and blocking of cyber attacks.
- Utilization of Artificial Intelligence concepts.
- A new layer of security for your infrastructure.
- Efficiency against "Zero day" attacks.
- Precision, with zero incidence of false positives.
- Protection for IT, OT, and IoT environments.
- Edge security, providing protection for internet routers and even your firewall.

Comprising both Hardware and Software, NetSensor Magic is installed at the **network edge**, **ahead of your Firewall** and even in front of the internet router. It analyzes traffic, identifies malicious sources, and automatically blocks cyber attacks proactively, without human intervention.

internet/cloud

NetSensor Magic operates **completely transparently** from a logical topology perspective, allowing for installation without the need for any changes to the network settings of the existing infrastructure.

Through a **dashboard, graphs**, and a **world map**, you'll have an incredible **real-time visibility** experience of detected and blocked attack attempts, with charts and statistics on blocks, IPs, countries, continents, and services.

 Monthly management reports with comprehensive graphs and statistics complete the visibility experience of identified and neutralized attacks on your infrastructure.

If you're looking
for a **reliable tool**,
be amazed by
NetSensor Magic.
